Computer Science Engineer and **Systems Enthusiast** skilled in C++, Rust and Python.

Technical Skills

C++, Rust, C, Go, Python, Odin, Java, Scheme

Software Design, Computer Graphics, Computer Architecture (Emulation)

Git, Make, Linux

Basic HTML and CSS

Projects

ChipAte

A Chip-8 emulator made in Odin. Implemented the entire architecture of the classic Chip-8 according to Cowgod's Technical Reference. The emulator was tested using Timendus' test ROMs and it passes all the tests for the classic Chip-8. Wrote a few ROMs for it myself. Also made a very simple assembler and a disassembler.

bfCk

A simple brainfuck interpreter written in c. Even wrote a simple tic tac toe program for it, by hand.

Experience

Junior core committee member at *CodeChef-VIT (club)*

- **CookOff Backend** - Contributed to the backend for CookOff, a live competitive coding event organized by the club with over 500 participants. Worked on the code submission pipeline for the server which has to handle a huge load and hold up well and not explode when 100+ people are running and submitting thier codes at the same time.

Interests

Systems Programming, Operating Systems, Compilers, Interpreters, Computer Architecture, Emulation, Networks, Computer Graphics

Education

Bachelor of Technology in Computer Science Engineering, *Vellore Institute of Technology*
2025 – present
